4.2 - Assess Current State

T&T

Outputs

Assess Current State is the process of examining the current environment under analysis to understand important factors that are internal or external to the organization, which may be the cause or reason for a problem or opportunity. The key benefit of this process is that it provides a sufficient understanding of the existing state of the organization, providing context for determining which elements of the current state will remain unchanged and which changes are necessary to achieve the future state.
