Business analysis plan

Conduct Business Analysis Planning is the process performed to obtain shared agreement regarding the business analysis activities the team will be performing and the assignment of roles, responsibilities, and skill sets for the tasks required to successfully complete the business analysis work. The results of this process are assembled into a business analysis plan that may be formally documented and approved or may be less formal depending on how the team operates. Whether the plan is formally documented or not, the results from all of the planning processes should be considered in the overall approach. Failing to make planning decisions can result in a less than optimal approach when performing the business analysis work. The key benefit of this process is that it sets expectations by encouraging discussion and agreement on how the business analysis work will be undertaken and avoids confusion regarding roles and responsibilities during execution.
