

8.4 - Manage Changes to Requirements and Other Product Information

Inputs

T&T

Outputs

Manage Changes to Requirements and Other Product Information is the process of examining changes or defects that arise during a project by understanding the value and impact of the changes. As changes are agreed upon, information about those changes is reflected wherever necessary to support prioritization and eventual product development. The key benefits of this process include facilitating the incorporation of important solution changes for projects, limiting unnecessary changes, and providing understanding of how change will impact the end product.
